

CF Series "Iron Pro"

The Iron Pro Systems are the perfect solution for removing iron from household water without using chemical regenerates. That means no salt, potassium permanganate, chlorine, or any other chemical to buy or mess with. Instead, this unique system oxidizes iron to create molecules that can be readily captured in filter media. Periodically, the iron is flush from the filter tank using only water. It's a fast and effective way to say goodbye forever to unwanted iron stains, tastes and residue.

- **Increases pH of acidic water** -- aids in iron reduction and stops corrosion.
- **Eliminates rotten egg smell** -- removes hydrogen sulfide (up to 3 ppm) and its rotten egg odors and eliminates resulting corrosion.
- **Conserves water** -- uses only a fraction of the water required by ordinary filters to regenerate (as little as 50 gallons for the most popular model).
- **Safe and effective** -- removes iron, manganese, and sulfur.
- **Eliminates rust stains** -- in the laundry, kitchen, and bathroom.

Model Number	Media Volume cu. ft.	Service Flow Rate (GPM)			Dimensions H" x W" x D"	Pipe Size
		Backwash	Peak	Cont.		
CF1044	1.0	5	10	3	56" x 12" x 18"	3/4"
